Art Unit: 3768

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 15-20, drawn to a method for embolizing blood vessels, classified in class 601, subclass 2.
- II. Claims 21-22, drawn to a method for reducing the size of a tumor, classified in class 601, subclass 2.
- III. Claims 23-24, drawn to a method for treating cancer, classified in class 601, subclass 2.
- IV. Claims 25-33, drawn to a ultrasonic radiation micro-bubble reagent for causing embolus, classified in class 601, subclass 2.
- Claims 34-38, drawn to a medical device for forming capillary vessel embolus, classified in class 601, subclass 2.
- VI. Claims 39-42, drawn to an ultrasonic treatment head for a device for forming capillary vessel embolus, classified in class 601, subclass 2.

The inventions are distinct, each from the other because of the following reasons:

Inventions are directed to related ultrasound application. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as

Application/Control Number: 10/556,237

Art Unit: 3768

claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed have either a materially different design or mode of operation. Inventions I, II, and III have different modes of operation, such as I may be used to occlude any blood vessel with an embolus, II is specifically used to reduce the size of a tumor (malignant or benign), and III is used specifically to treat a cancerous tumor. Each of these method are distinctly different from any of apparatus Inventions IV, V, and VI. Specifically, IV is a micro-bubble reagent and its composition, V is a device with embolizing, positioning, and treating portions, and VI is a treatment head for a device and its components. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Rozanski whose telephone number is 571-272-1648. The examiner can normally be reached on Monday - Friday, 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eleni Mantis-Mercader can be reached on 571-272-4740. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
